

NEW

Biodegradable Product line

- 13-Gallon Tall Kitchen
- 30-Gallon Lawn & Leaf
- 10 x 20 Drop Cloths
- Cat Pan Liners:
Medium, Large, Jumbo
- Doggie Duty™ Bags
- Commercial Line:
all sizes and we will
customize to fit
specifications
- Branded in-store
checkout Bags
- Fresh Produce Bags

Features & Benefits

- Biodegradable and 100%
degradable-breaking
down and leaving no toxic/
harmful or visible residue.
- Perf Go Green is ASTM D6954
compliant
- Certified by the FDA as a
food contact compliant
- Using post-consumer recycled
plastic to make our bags-
we actively remove plastic
waste from the environment
- Unique Patented Dispensing
System
 - One bag will dispense one
after another
 - Our dispenser is stored
(with sticky tape) in the
bottom of the trash can
 - Revolutionary patented
perforation design
- Patented perforated,
handle tie bags
- Extra Strong & Durable
- Perf Go Green is perfect for
the planet
- Perf Go Green is simply the
quickest and easiest way
to do trash!

Biodegradable Plastic Products

Plastics & Petroleum vs. Corn Starch & Compostible

Plastics have been getting a bad rap because regular plastics do not biodegrade or degrade in the environment and last for hundreds and hundreds of years. Only 2% of plastic waste gets recycled. On one hand, plastic is a viable and valuable commodity. The problem is that very little of it is recycled and until now plastic additives to speed up biodegradation and degradation are just being certified and gaining recognition. So while 7th Generation uses recycled plastic (up to 56%) for their garbage bags (still a good thing), Perf Go Green not only uses recycled post consumer plastic to make Perf Go Green trash bags, they add an Oxo-biodegradable plastic additive that allow the product to completely return to nature as carbon dioxide, water and biomass disappearing in the environment in 12-24 months. Perf Go Green products leave nothing behind, no harmful toxins, no residue, or methane gases.

Corn based products (while compostible) use a valuable food source and have been found to be weak and can begin to disintegrate on the store shelves in certain climate conditions. In addition, these products contribute to methane gases in the environment.
